

1. Wentian Li and Pedro Miramontes

On Acceleration of Major Transitions in Evolution

2. Roberto Alvarez, Germinal Cocho and G. Martínez Mekler

Mutation-Duplication Models leading to Rank-Ordered Beta-Type Distributions

3. Roberto Alvarez

Molecular evolution, unimodal maps and spin systems. A tale of two competing processes

4. Germinal Cocho

Morphological constraints in evolution: color patterns in vertebrates

5. Eberto Morgado

Algebraic structures and their applications to the description of the Standard Genetic Code and mutations in the biological world

6. Tzipe Govezensky

The 24 different ways of defining a structure of a six dimensional vector space in the set of triplets of the standard genetic code

7. Víctor Serrano

The mutual information function of virus: the case of influenza AH1N1

8. Miryam Palacios

Archeoproteomic: the proteome before LUCA

9. Gabriel Garduño-Soto

Logical Genetics: The case of the Mendel law 9:3:3:1

10. Jaime Lagunez

Some reflections of molecular evolution

11. Homero Garcés Flores

Non-coding RNA genes in *Taenia solium*

12. Marco V. José

On the evolution of human and non-human primate species

13. Rafael Méndez and Ma. Fernanda Higareda

Nearest Neighbor spacing distributions of bases in different species within the same genus
